

Early Action Saves Lives!

⇒ Effective bystander CPR, provided immediately after cardiac arrest, can double a victim's chance of survival.

⇒ CPR helps maintain vital blood flow to the heart and brain and increases the amount of time that an electric shock from a defibrillator can be effective.

⇒ Approximately 95 percent of sudden cardiac arrest victims die before reaching the hospital.

⇒ Death from sudden cardiac arrest is not inevitable. If more people knew CPR, more lives could be saved.
